

Jing Mold Electronics Technology Co., Ltd.

Energy Saving and Carbon Reduction Targets

With the rapid development of the global economy and society, humanity's excessive consumption of resources and energy such as water, oil, and coal has led to a series of environmental problems, including resource depletion, the greenhouse effect, increased extreme weather events, and difficulties in waste disposal. As a company with a strong sense of social responsibility, Jing Mold Electronics Technology (Shenzhen) Co., Ltd. pays close attention not only to its own development but also to the negative impacts that environmental and climate changes have on all of humanity. We deeply recognize that pursuing a sustainable development path of "energy conservation, consumption reduction, emission mitigation, and efficiency enhancement" is the only choice for protecting the Earth and all of humankind. We hereby solemnly commit to the following:

1. Reduce greenhouse gas emissions. Establish an energy management system and build a green manufacturing facility. Using 2025 as the baseline year, reduce greenhouse gas emissions by more than 3% annually.
2. Conserve water, increase wastewater recycling and reuse, promote multi-purpose water utilization, and construct facilities for rainwater collection, storage, and comprehensive use to reduce fresh water intake.

Using 2025 as the baseline year, reduce per capita water consumption by more than 2% annually.

3. Promote green product design, enhance environmental awareness among all employees, reduce waste generation at the source, and strengthen waste recycling and reuse. Using 2025 as the baseline year, reduce waste generation by more than 2% annually.

4. Actively promote the development of renewable energy, as it is a crucial means of addressing the current energy crisis and the increasingly severe global climate challenges. We commit to achieving 100% renewable energy use by 2050, and we hope that through this action we can contribute to the global clean energy transition.

We will continuously monitor the achievement of the above targets and make timely improvements. With an open and cooperative approach, we welcome oversight and suggestions from all parties, and we remain firmly committed to the path of sustainable development.
